

## **Caravan Salon 2010: Webasto presents system solutions for greater freedom when travelling**

**Webasto will be presenting system solutions for unlimited mobile holidays between 28 August and 05 September 2010 in Hall 13, booth A70.**

**Stockdorf/Munich– July 12, 2010** – Webasto will be presenting itself from 27 August to 05 September 2010 in Düsseldorf at the Caravan Salon true to the motto "Enjoy comfort, enjoy independence". The traditional company will be exhibiting its product portfolio in Hall 13, booth A70: the integrated heater Dual Top, the Thermo Top Motorcaravan water heater and the Air Top Evo air heaters. The advantages of a Webasto diesel heater are clear: more space and less weight in your motorhome. The Webasto diesel cooker and EFOY fuel cell round off the product portfolio. Webasto enables individual travel without gas in motorhomes as all of these solutions use diesel as a fuel, except the EFOY fuel cell that works with methanol.

"Thanks to the efficient energy supply for the devices with the vehicle's own fuel, our quality products give travellers even more comfort and independence in their mobile home", explains Denis Merle, head of the RV division at Webasto AG. "This makes gas cylinders superfluous in motorhomes, and allows gains in space and savings in weight," continues Merle.

### **Experience close up freedom and comfort: Webasto products at your fingertips**

The Webasto highlight at this year's leading show for mobile holidays is the modern trade fair strategy. The booth is divided up into three parts and guides visitors through the range of products on show. On the left side of the stand, interested parties are given not only the latest information about the exhibits but can also experience how the heating systems are put together and how they work in the vehicle. Detailed cutaway models of the Dual Top and Thermo Top Motorcaravan provide a fascinating insight into their inner life. In the middle of the booth a Dual Top is put to its paces in a kitchenette, which is kept constantly supplied with warm air and hot water from the Webasto heating system. The right side of the booth demonstrates all of the advantages of the Air Top Evo: high efficiency, low consumption, smart temperature management. This air heater will also be presented for the first time this year with a standard altitude sensor, the Automatic Altitude Adjustment. The weight saved with a diesel heater offers users a special advantage since the checks and regulations with regard to EU weight limitations for motorhomes are increasing. The Webasto diesel cooker and an EFOY fuel cell round off the portfolio of exhibits from the automotive supplier. And finally, visitors will experience a piece of adventure with a film about a Matthias-Jeschke expedition from New York to Paris.

### **Always "on board" – the energy supply from the diesel tank**

The advantages of the Webasto solutions for motorhome owners are obvious: comfort, freedom and weight savings. Since all of the heating systems as well as the diesel cooker are operated from the vehicle's own diesel tank, no cumbersome gas cylinders are needed inside the vehicle to operate the heating, shower or cooker. Travellers thus not only have more space to live, they can also say goodbye to the nerve-racking refilling of gas cylinders. All they have to do is fill up the tank!
